To Save Life and
Protect Property

www.safeengg.com

Why Fire Protection?

Each application has its own risk profile and requires an individual risk analysis, definition of safety objectives and solution. Fire protection is much more than just protecting buildings. Human lives are at risk! Furthermore, valuable - even irreplaceable - property and data must be protected from the fire itself and damage from extinguishing. In many sectors, even short interruptions in production or operations caused by a fire can restrict availability to the point of endangering the survival of the company. Even a small, smoldering fire can quickly become an existential threat to your business.

Fire knows no rules!!! That is why Safe Engineering is committed to provide systematic fire protection.

Why Safe Engineering?

Safe Engineering specializes in Designing, Supplying, Installation and Commissioning of Fire Fighting and Fire Alarm Projects. As a service oriented company we don't depend on any sole brand products, nor are we tied to one specific proprietary brand.

As an independent company we are choosing from a wide variety of products available as per client's requirement or specifications by the consultants. Our Managing Partners and Designers have worked in the Fire Protection Industry for over 9 years where they have gained experience in all aspects of Fire Protection systems and the full team has well experienced fire technicians and engineers.

What else?

Safe Engineering not only offers consultancy, project planning and installation services, but also any required after-sales services all from a single source. Our fire protection solutions thus contribute to your business processes running smoothly, thereby making your work considerably safer throughout the entire property life cycle.

**Fire knows no rules!!!
That is why Safe Engineering
is committed to provide
systematic fire protection.**
